DEATHS

MRS. WILLIAM L. TURNS

Mrs. Gertrude I. Turns, 85, widow of William L. Turns, died at 5 P. M. Wednesday at the home of her daughter, Mrs. Robert H. Coleman, of Route 3, Appomattox, after a two-week illness.

She was born in Appomattox County, April 29, 1872, the daughter of the late Turner P. and Elizabeth Bagby Inge.

She was a member of Bethpar Baptist Church, Prince Edward County, where funeral services will be held Friday at 11:00 A. M. Burial will be in the church cemetery.

Mrs. Turns is survived by six daughters, Mrs. Coleman, Mrs. J. L. Torrence, Mrs. W. T. Covington, of Appomattox; Mrs. O. C. Smith, of Richmond; Mrs. B. C. Gilliam and Mrs. W. R. Gilliam, both of Farmville; two sons, W. L. Turns, Jr., of Farmville, and D. Raynard Turns, of Rustburg; two sisters, Mrs. Steven Cyrus and Mrs. Daniel Cyrus, both of Spout Spring; two brothers, A. B. Inge, of Alexandria and T. C. Inge, of Shirley, Ohio, fifteen grandchildren and 13 great-grandchildren.

J. R. HUBBARD

(From The State, Columbia, S. C.)

Marion.- James Rawlings Hubbard, 79, an agent for Coast Line Railroad, died August 2 in a hospital in McCain, N. C., after a long illness.

Mr. Hubbard was born in Appomattox, Va., and lived in Dunn, N. C., Marion, and Myrtle Beach.

Survivors include one daughter, Mrs. Frank G. Hughes, of Myrtle Beach; three sons, W. L., of Laurens, J. I., of Raeford, N. C., and Bernard R. Hubbard, of Marion; one sister, Mrs. John C. Moore, of Appomattox, and seven grandchildren.

Funeral services were held Saturday, August 3, at 3 P. M., from the Myrtle Beach Methodist Church, by the Rev. J. E. Merchant. Burial was in Rose Hill Cemetery in Marion.

(Attending the funeral from Appomattox were Mrs. J. C. Moore, Hubbard Moore, Louis Moore, Mr. and Mrs. Clarke Moore, Mr. and Mrs. J. Graydon Martin, and Mr. and Mrs. R. Clayton Martin).

Wisconsin Republicans nominated Walter J. Kohler, Jr. for the Senate seat held by the late Joseph R. McCarthy. Kohler, pro-Eisenhower Republican, will oppose Democrat William Proxmire in the general election, August 27.

St. Patrick Shrine Bringing Fame to Missouri Town

ST. PATRICK, Mo.—This unique little town in the verdant hills of northeast Missouri has a new feature that draws many visitors.

If present interest continues, the new church—or Shrine of St. Patrick—will be one of the most photographed landmarks of our country. Visitors are already flocking to the site, although the shrine is not fully completed.

It will be perhaps the only church in our country with a round tower, a sort of dream from the middle ages. Erected of beautiful cut stone, it takes the visitor back to the hills and valleys of Ireland—the Isle of Saints with its glorious past. Its stained glass windows, made in Dublin, depict some of the Irish Saints. The choir window, now in place, contains such a variety of colors that it can be safely said there is no other window exactly like it.

The central figure, of course, is St. Patrick, who seemingly belongs to all nationalities, especially around March 17th. Surrounding the good Saint we find the Coat of Arms or the emblems of the four provinces of Ireland. The Red Hand of O'Neill, always raised in the cause of faith or freedom, is on the top. At the bottom are the Crowns of Munster, reminding of the kings who reigned by the Rock of Cashel even before the time of Christ. On the right is the Harp of Leinster, the great musical instrument of Ireland that goes back beyond the days of King David. On the left is the emblem of Connaught —the dagger of defense and the dove of peace.

Seeing Ability Affects Driving

NEW YORK—Indications of the vital relationship of seeing ability to highway accidents show up on all sides. For example, two-thirds of all traffic deaths occur at night, although one-third of the driving is done then. Poor seeing conditions, such as rain, snow, and sharp turns obscured by bushes, are a factor in one-fifth of the fatal highway accidents.

Comparative studies of accident-free drivers versus accident-repeaters also reveal significant trends. The repeaters are inferior in ability to see with both eyes together at the same time, in depth perception, ocular muscle balance, and visual acuity. As visual acuity decreases from 20/35 to 20/50, there is a rapid increase in accident rate. Up to 56 per cent of the repeaters have tunnel visual (inability to see objects on the side while looking straight ahead) as against only about one to three per cent of the accident-free drivers. This is a crucial point, because some 75 per cent of all traffic mishaps involve objects on the side.

Catastrophes Took Fewer Lives in '56

NEW YORK—Catastrophes—defined as those accidents in which five or more persons are killed—took more than 1,300 lives in the United States during 1956, about 150 less than in 1955.

The more favorable record reflects a smaller death toll in major catastrophes—those in which 25 or more lives were lost. During 1956 there were five such catastrophes which accounted for about 270 lives; in 1955 nine catastrophes of this magnitude caused the loss of more than 600 lives.

Not in many years has the death toll from outstanding natural disasters been so low. In 1955 the major hurricanes, floods, and tornadoes accounted for the loss of more than 450 lives, compared with only 23 during the year just ended.

Wierd Creatures on Barro Colorado Isle

WASHINGTON—Wierd creatures are the fashion on Barro Colorado, the Smithsonian Institution's tropical preserve in the Panama Canal Zone. For instance, there's the turkeylike curassow. In this family, the male should be boss; he has a roar that sounds "like a lion"—and the female is usually silent.

There is also a fruit-eating hawk known as "burja," the witch—a bird about the size of a raven whose back is coal-black. It has a white belly, red feet, and a greenish-yellow bill which sometimes is slightly blue at the tip. The name, however, is due less to its wierd appearance than to the almost continual "scolding" of other birds, or at any intruder into its retreat.

Capitol Classic

WASHINGTON—The 72 Ionic columns of the United States Treasury Building form one of the Capitol's classic sights. Each column measures 36 feet, nine inches in height, 12 feet, 6¾ inches in circumference, and weighs 33 tons. All were cut from single blocks of granite.

Lengthy Reports Being Replaced by Magnetic Tapes

SCHENECTADY, N. Y.—A roll of magnetic tape about the size of a dinner plate has replaced a 900-page report to speed the Social Security information of 30,000 General Electric Company employees from Schenectady to Baltimore.

This latest application of automation principles to accounting marks the beginning of a new era of data transmission between industry and the government, since this is the first application of the procedure.

GE officials say the potential savings of such an operation are tremendous to both the government and the company. General Electric employs more than 280,000 persons throughout the country and eventually it is expected that Social Security information for most of them will be forwarded by the tape method.

In addition to the saving in time and material for the preparation of the records, there is also a huge saving in storage space required to keep the records.

The tape, which is approximately 2,400 feet long and weighs about two pounds, carried the quarterly Social Security report for most of the General Electric employees in the Schenectady area. Until tape was used, it was necessary to prepare more than 900 typewritten pages, each containing 30 to 40 names; four times a year to supply the quarterly figures which the government requires for Social Security

Honey Bees Share And Share Alike

WASHINGTON — With honey bees it's share and share alike.

A single sample of sugar or nectar brought into a hive by a forager is participated in by all the members of a family—all progeny of a single queen—and from any number more than 50,000 individuals.

Thus all get essentially the same diet and all acquire a common odor by which they can recognize each other. This odor constitutes a "scent language" which is a basis of the extremely complex bee social life.

These observations, based on experiments with radioactive sugar, are reported by Dr. Ronald Ribbands of Cambridge University.

In one of these experiments, Dr. Ribbands says, "a marked bee is trained to collect sugar solution from a small glass tube, and when radioactive sugar is substituted the bee continues to collect the radioactive syrup quite happily. It returns to the hive, and what happens to the labeled sugar can be followed quite easily. Every bee that receives some can be spotted by means of a geiger counter."

1956 Best Year for Life Insurance

NEW YORK—American families in 1956 bought more new life insurance, increased their ownership of life insurance to a larger aggregate and received more in life insurance benefit payments than in any year on record, according to the Institute of Life Insurance.

The year's purchases of new life insurance are estimated at $55,600,000,000, some $7,200,000,000 more than in 1955 and nearly $45,000,000,000 more than in 1940.

Aggregate life insurance owned in the country reached an estimated $415,000,000,000 at year-end, up nearly $43,000,000,000 in the year and nearly $300,000,000,000 more than in 1940. Life insurance in force now averages over $3,900 for the nation's 106,000,000 policyholders. It is more than $7,500 per family, countrywide, and over $9,000 per insured family.

Three Considerations When Buying House

NEW YORK—There are three things you should consider when you start thinking about buying a house: 1. Cost. 2 Size. 3. Equipment and materials.

As for size, we're fast approaching the 1,500-square-foot mark. You should insist on at least two bathrooms; 150 square feet of kitchen at a minimum; three to four bedrooms; facilities for a family room. Equipment should include built-in kitchen appliances and modern bathroom fixtures in color. Materials should be of proven worth such as durable, waterproof ceramic tile in bath and kitchen, copper plumbing, seasoned lumber.

Man-Made Timbers

WASHINGTON—Man is no longer dependent upon nature to grow giant timbers. By gluing together small pieces of seasoned lumber, timber fabricators can produce "factory grown" timbers of virtually any size or shape. Only limiting factor is the size of timber that can be handled in transport from the fabricating plant to the building site.

RIPE WATERMELONS HARD TO IDENTIFY

An experienced grower of watermelons may have confidence in his "thump."

But watermelon is one of the most difficult vegetables to harvest at the right stage of maturity, according to horticulturists at VPI.

At harvest time, they say, the old "thumping test" may help those with a keen ear and considerable experience. If the melon has a metallic ring when thumped, it is green. However, if ripe the sound will be muffed and dead.

An easier way is to examine the rind where it touches the ground. The melon usually is ripe when the area has turned from white to pale yellow, but this is not always definite.

Another tip: leave about two inches of the stem on the melon when harvested unless it is to be eaten immediately.

Cantaloups is immature when the net is flattened with a slight crease along the top, and the color through the netting is dark green or grayish green. The cantaloupe usually is ripe when the net is fully rounded and the color through the netting is yellowish green. Also when ripe, the cantaloupe slips easily from the stem, leaving a big scar.

The Navy has ordered a machine that can do in two minutes the mathematical calculations that would take a man a lifetime to do. Called the UNIVAC-LARC, it will provide speedier and more accurate computations for designers of the Navy's atom-powered fleet.

The Atomic Energy Commission recently disclosed it had approved a first shipment of radioactive isotopes to Russia for use in cancer research.

School examinations have been blasted by a Brit' doctor as a "savage survival" of tribal initiation rites.

Charles S. Rhyne was recently elected as the youngest president in the history of the American Bar Association.
